

User Experience

We offer the most flexible and widely valued WiFi solution in the industry. Tailored head to toe specifically for recreational venues and the hospitality industry. The flexibility that NomadISP offers is apparent the moment your guests access the Internet.

First, we present each user with a customizable welcome page. The welcome page is your guest's doorway to the Internet.

Choose from over a dozen themes to find one that best suits your business. You may specify a list of websites users may access without logging on to the system. These "preview sites" are a great way to direct traffic to your website or a local event calendar. You may also customize messages displayed to your guests. (See the upper left hand corner on the example above) This can be a great area to post bulletins and other important information. The welcome page is available even if the Internet is not. So if for some reason you expect an outage of service you could notify your guests before they come to the office.

NomadISP offers the highest quality, non-obtrusive WiFi service in the industry
